Intro:

Our website consists of three goals we have chosen which we thought were relevant to us. We included accessibility features like the translator function which changes the language in real time without requiring the user to hard refresh each time. This is done through Json injection.

Features and functionality -

- Navigation bar
- Language changer
- Content fetching from Json
- Form Validation
- Email sending using node mailer.

Each person was in charge of the following pages:

Task	Person
Header	Harry
Homepage	Maxim
About Us	Luke
Goals	Harry, Sinan
Sign Up	Sinan
Footer	Maxim

They did not code the whole thing from start to finish, they oversaw it, meaning they controlled the tasks for each page and allocated tasks to each relevant person.

Sinan – Backend

Harry – Frontend Developer

Maxim – Designer

Luke – Json content writing
